

Secure and instant access to medical images from an EMR

“With Trice Imaging we have been able to both secure revenue for all the services we perform and save on image storage and staff hours. Tricefy™ doesn't add any steps to our process and enables a collaboration between our professionals, which is leading to better care.”

- Payeman Raja, CIO & CMIO, Womens Health Care, PC

Trice

One click access to all your patients data from the EHR

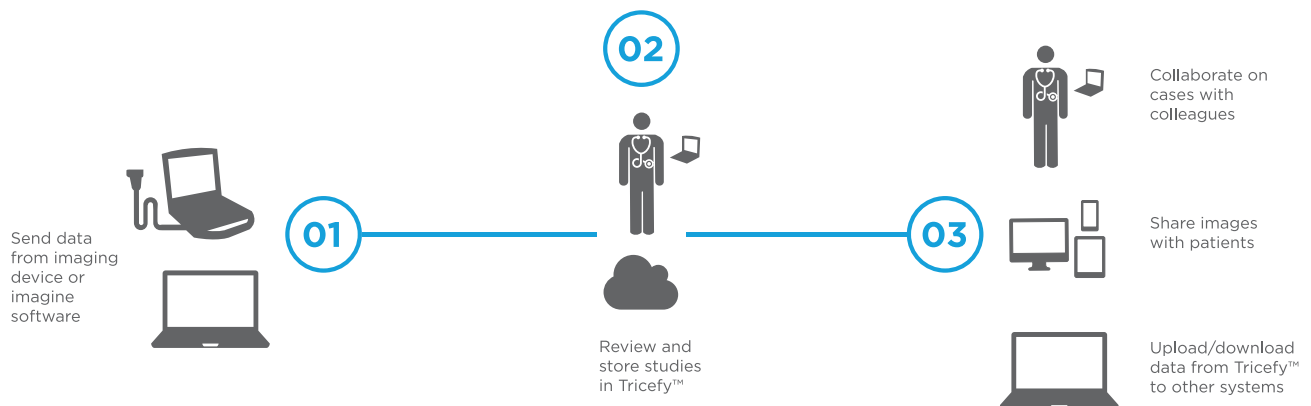

Tricefy™ easily integrates medical imaging into the patients chart. Help drive productivity and move towards meaningful use goals by leveraging leading industry standards to ensure your EHR provides one view for all patient data

- NO storage space for images on local computers and servers
- Eliminate manual processes like scanning in thermal prints or importing .jpps to an EMR
- Enables access to images within an EMR
- Ensures every image from every study is archived in a high-quality digital format
- Leverage industry standard API's such as HL7 and JSON to integrate your EMR

Tricefy™ is innovating the way healthcare providers share and collaborate with patients and colleagues through a web-based, image routing platform for medical images and cine clips from any modality, anytime, anywhere.

- A cloud-based system requiring no hardware and software investment or change to the clinic's work flow
- HIPAA compliant with FDA Class I classification, protected by multiple patents
- A single Internet connection, 5 minutes for installation, 10 minutes to learn and 1 button to press - regardless of the imaging system currently in place
- Highly secure, scalable and redundant platform
- Optimizes workflow and satisfies modern expectations for better patient care
